LTV 170: NOT JUST A TV SCREEN

The Olivetti LTV 170 monitor introduces a whole new concept in TV screens. Its innovative technology transforms the ways people use the PC monitor, providing a multi-input viewing system that offers endless possibilities.

With its smart harmonious design, the Olivetti LTV 170 combines cutting-edge technology with impressive versatility. This means you can use it with any video device – a television or DVD, a digital camera or PC – to replace the conventional TV screen with “global visual output”, which you program with a lightweight remote control. The monitor is fitted with four video input connectors (VGA, DVI, S-Video and Composite), a TV antenna jack and an audio input/output connector. Features also include 4 W lateral stereo speakers.

ULTRA-FLAT PROFILE

The 17-inch monitor with 1280 x 1024 dpi resolution has an ultra-flat liquid crystal display and a design that blends easily into any type of setting. With the special VESA FDMI mounting kit, it can be fixed to the wall, an elegant addition to your home or office. The Olivetti monitor offers broad viewing angles, together with a bright, glare-free picture with no distortions. Its advanced technology eliminates electromagnetic fields and delivers flicker-free images.

MULTIPLE VIEWING

Now you can watch television while you work at the PC. The Olivetti LTV 170 monitor implements the innovative “Picture in Picture” function, to let you run your usual desktop functions and watch TV at the same time, on an on-screen window. With the result that work and leisure can be rolled into one.
